Foreword

Microbiology Abstracts, Section B commenced publication in 1966 and is published monthly. Each issue contains about 1,100 abstracts followed by author and subject indexes.

Coverage

In compiling each month's issue, CSA's editorial staff monitors approximately 5,000 primary journals and other source references for papers falling within the scope of Microbiology Abstracts Section B.

Subject scope and arrangement of subject matter

The table of contents shows the full scope of the journal. Papers relevant to bacteriology are reported, including: methods; taxonomy; cell properties; genetics; antibiotics and other antimicrobials; toxins; immunology; medical, veterinary and invertebrate bacteriology; plant diseases; and ecological aspects. Abstracts are allocated to the section (subsection) to which they are most relevant and cross-referred to other sections (subsections) where appropriate.
